INT-CL (IPC): H01L021/304

ABSTRACTED-PUB-NO: TW 420844A

BASIC-ABSTRACT: NOVELTY - Decreasing the removing rate of polishing for low

dielectric constant material comprises depositing a low dielectric constant material on a semiconductor substrate to form a dielectric layer, and performing an NH3 plasma, N2 plasma or Ar plasma process to increase the density degree of the dielectric layer, thereby decreasing the removing rate of polishing.

ADVANTAGE - The selectivity of chemical mechanical polishing process is increased, so as to assist the integration of the low dielectric constant material and copper damascene process.
